

**EQACC SOLAR**

# **Western European household solar container battery production plant**

## Overview

---

Can Europe build a competitive battery cell production landscape?

Despite these challenges, Europe has the potential to build a competitive battery cell production landscape. According to CRU, Europe can close the gap with China through automation, lower electricity costs, reduced lithium prices, and production optimization. It won't be easy, but it is possible.

How many battery energy storage systems did Europe<sup>1</sup> install in 2024?

In 2024, Europe<sup>1</sup> installed 21.9 GWh of battery energy storage systems (BESS), marking the eleventh year of record-breaking annual additions since 2013, when our records began. The latest additions take the total running European battery fleet to 61.1 GWh at the end of 2024.

Why is the battery industry growing in Europe?

The European Union's ambitious targets to reduce carbon emissions and promote sustainable energy have led to a surge in demand for electric vehicles and renewable energy systems. As a result, the battery manufacturing industry in Europe is experiencing unprecedented growth.

Which countries have the most battery storage in Europe in 2024?

In 2024, Europe's top three battery storage markets – Germany, Italy, UK – solidified their dominance, with Austria and Sweden closing the 'top 5' ranking (see Fig. 2). 2024 marked the first year when reaching the GWh scale of annual installations was required to access the top 5.
