# What are solar tiles

## Overview

---

Photovoltaic tiles, also known as solar tiles or solar shingles, are building-integrated photovoltaic (BIPV) systems that function both as roof tiles and solar panels. What are solar tiles?

Solar tiles are roofing materials that can produce energy directly from sunlight. Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof.

What are solar tiles & how do they work?

Solar tiles are like mini solar panels, but they are installed as part of a roof alongside traditional roof tiles rather than sitting on top of them. They are designed to blend in with the roof's aesthetics and can only be installed if you're fitting a completely new or replacement roof.

What is solar roof tile?

Solar Roof Tile designed by ANU is for single groove designed Mangalore Tiles and can be used for all types of Solar Power Applications. We have also kept the rates at par with conventional panel along with mounting structure so that there is not much of an incremental cost to switch over to Solar Roof Tile.

What is the difference between solar panels and solar tiles?

What's the Difference Between Solar Panels and Solar Tiles?

Both solar panels and solar tiles include photovoltaic (PV) cells which capture energy from the sun so it can be converted into electricity, enabling you to power your home using more free, renewable energy, lower energy bills and reduce your reliance on energy suppliers and fossil fuels.
