

## EQACC SOLAR

# Where are the uninterruptible power supply networks for Iceland's solar container communication stations

## Overview

---

What would happen if Iceland had a non-served energy supply?

If Iceland experienced a non-served energy supply, existing secondary energy would be equal to around 147GWh (0.9% of industrial demand), and non-served energy would be approximately 30GWh. This would not only include buyback energy. Iceland would experience severe curtailments, around 50GWh, one out of eighteen years.

Why does Iceland need a transmission network?

y for Iceland. A robust and efficient transmission network is necessary to handle the increased generation of renewable energy, from various locations of windmills, geothermal and hydroelectric power, to ensure a stable supply of electricity across.

Does interconnector increase energy security in the Icelandic system?

The interconnector increases energy security in the Icelandic system, as it functions as backup in instances of scarcity and necessitates an expansion of the local generation capacity.

Why is a strong transmission grid important in Iceland?

al in Iceland. An effective and strong transmission grid is essential for the integration of renewable energy sources, such as from wind, geothermal and hydroelectric power in various locations, which are abundant.

**Product Model**  
HJ-ESS-215A(100KW/215KWh)  
HJ-ESS-115A(50KW 115KWh)

**Dimensions**  
1600\*1280\*2200mm  
1600\*1200\*2000mm

**Rated Battery Capacity**  
215KWH/115KWH

**Battery Cooling Method**  
Air Cooled/Liquid Cooled
