# Which energy storage power station in Portugal is the best

## Overview

---

Can storage replace thermal generation in Portugal?

The pursuit of economic viability by storage facility owners will inherently lead to charging during low-cost hours and discharging during hours that are more economically attractive. Storage can replace thermal generation in constraint markets, easing the grid and supporting Portugal's 2040 phase-out target.

What is the reservoir capacity of Portugal?

The total reservoir capacity is equal to 13,290 hm<sup>3</sup> and the biggest reservoir capacities can be found for Guadiana and Tagus, which are rivers with their origin in Spain . Portugal currently has an installed hydropower generation capacity of 8.2 GW (5.3 dammed hydropower plants and 2.9 run-of-river), from which 3.6 GW are pumped hydro storage.

Can hydro-pumped storage systems be used in Portugal for 2030?

This work proposes a new methodological approach to assess the potential role of the hydro-pumped storage systems in Portugal for 2030, taking into consideration the impacts of climate change. 4.1.

How much energy will Portugal produce in 2021?

This figure is lower than that reported with the APA, which for Portugal (mainland and islands) was 7.6 Mton in 2021 . According to the NECP (which also includes the mainland and islands), the power generation sector is expected to reduce emissions by 83 % in 2030 compared to 2005, so the value considered for 2030 should be 4.34 Mton.
