# **Why is the electricity fee of 5g base stations too high**

## Overview

---

Are 5G base stations causing more energy consumption?

However, Li says 5G base stations are carrying five times the traffic as when equipped with only 4G, pushing up power consumption. The carrier is seeking subsidies from the Chinese government to help with the increased energy usage.

How much does a 5G base station cost?

Setting up a 5G base station is expensive, with costs ranging from \$100,000 to \$200,000 per site. This price includes hardware, installation, site rental, and maintenance. Urban areas often have higher costs due to land prices and infrastructure challenges.

How will 5G affect the energy consumption of mobile operators?

Edge compute facilities needed to support local processing and new internet of things (IoT) services will also add to overall network power usage. Exact estimates differ by source, but MTN says the industry consensus is that 5G will double to triple energy consumption for mobile operators, once networks scale.

Will 5G cost more than 4G?

Estimates suggest that operating expenses (Opex) for 5G will be 30-50% higher than for 4G. This increase is due to higher energy consumption, increased site maintenance, and the complexity of managing a dense network of small cells and new frequency bands.

## Why is the electricity fee of 5g base stations too high

---

### 5G Base Stations: The Energy Consumption Challenge

However, high energy-efficiency does not necessarily mean lower energy/electricity consumption for 5G base stations. Besides, the adoption of C-band or ...
