

## EQACC SOLAR

# Will there be any roof collapse after solar panels are installed

## Overview

---

Can solar panels cause roof leaks?

However, a common concern that arises after solar panel installation is the potential for roof leaks. Understanding why leaks can occur, how to prevent them, and what steps to take if they do happen is crucial for maintaining the integrity of your home.

Does installing solar panels damage the roof?

Installing solar panels can reduce the area available on the roof for vents, making it more difficult for firefighters to cut holes for ventilation. Ventilation helps reduce heat, prevent fires from spreading, and increase visibility. Solar panels do not damage the roof but can impact the roof's suitability for firefighting operations.

What happened to rooftop solar panels?

In 2013, a fire broke out at a 300,000 square foot meat warehouse in Delanco, New Jersey. Rooftop solar panels were present. Firefighters reported that the panels caused them to change tactics while fighting the fire. The building was eventually destroyed after 29 hours. Firefighter's opinion: 'Do I think we'd have had a different outcome if we could get on the roof?

Sure.'

Can solar panels be installed on a rooftop?

Often the installation of solar panels is primarily on the rooftops. Because rooftops are susceptible to damage and may require replacing after a while, solar panels installed on rooftops will stand in the way. The entire solar unit must be disabled, disbanded, and then reinstalled after the new roof is put back into place.
