## Overview

---

The aim of this paper is the design and implementation of an advanced model predictive control (MPC) strategy for the management of a wind-solar microgrid (MG) both in the islanded and grid-connected mode.

How to optimize energy storage capacity in wind-solar-storage power station?

Based on the actual data of wind-solar-storage power station, the energy storage capacity optimization configuration is simulated by using the above maximum net income model, and the optimal planning value of energy storage capacity is obtained, and the sensitivity analysis of scheduling deviation assessment cost is carried out.

Do energy storage capacity and wind-solar storage work together?

This paper considers the cooperation of energy storage capacity and the operation of wind-solar storage based on a double-layer optimization model. An Improved Gray Wolf Optimization is used to solve the multi-objective optimization of energy storage capacity and get the optimized configuration operation plan.

What is wind-solar integration with energy storage?

Provided by the Springer Nature SharedIt content-sharing initiative Policies and ethics Wind-solar integration with energy storage is an available strategy for facilitating the grid synthesis of large-scale renewable energy sources generation. Currently, the huge expenses of energy storage is a significant constraint on the economic viability of.

Can energy storage be used in a wind-solar microgrid?

Abstract. To make full use of the electric power system based on energy storage in a wind-solar microgrid, it is necessary to optimize the configuration of energy storage to ensure the stability of a multi-energy system.
