

# Wireless solar container communication station lead-acid battery and relay

## Overview

---

What is a solar charging system?

It is renewable and supportive for diverse charging needs. The system key design parameters are: 200-W solar panel, 12-V 900-Wh deep-cycle lead acid battery, 300-W 120-VAC pure sine-wave inverter, 8 outlets (2 wireless, 4 DC USB and 2 AC). It aims to supply an average load of 175Wh. A prototype of the station is built and tested.

What are the design parameters of a solar power station?

The system key design parameters are: 200-W solar panel, 12-V 900-Wh deep-cycle lead acid battery, 300-W 120-VAC pure sine-wave inverter, 8 outlets (2 wireless, 4 DC USB and 2 AC). It aims to supply an average load of 175Wh. A prototype of the station is built and tested. The testing results show that the station works properly.

How does a solar power station work?

A prototype of the station is built and tested. The testing results show that the station works properly. The control system switches the outlets on and off accurately based on the battery available energy. On a sunny day, with the solar panel and the battery operational, the system can support a full load of 150Wh until the sun is gone.

Can a solar-powered charging station be used for portable electronics?

For convenient transportation and use in numerous locations, a solar-powered charging station for portable consumer electronics has been developed [2, 3]. Reducing the quantity of energy necessary to offer different goods or services is crucial if we want to move toward energy sustainability . .
